

GLIDEROL® SELF STORAGE SOLUTIONS

A joint venture between Gliderol® UK, Ltd and Janus International, a US Corporation

Get Ready For

The 2012 Olympics is coming! Planning extra storage capacity for the huge influx of visitors the Games will create is made easy with External Modular Storage (EMS) units.

External Modular Storage Units are:

Re-locatable, Flexible

Much more flexible than traditionally built structures, EMS units are perfect if you need to add extra storage units. Place them wherever you need them and, if your plans change, a fork-lift relocates the units in moments.

Configureable, Ready Made Solutions

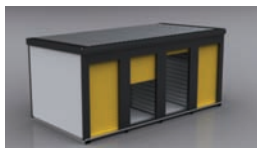

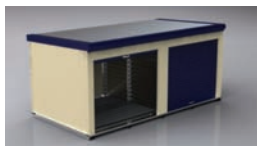

Multi-room, single room and mixed sizes can be built to suit your requirements and delivered fully assembled or in kit form for on-site assembly - you decide. The look of a permanent structure with the flexibility of a portable.

Walls are fabricated from Insulated steel composite panels and roof construction employs steel sheeting with an anti-condensation vapour barrier or aluminium faced glass backed insulation.

Space Efficient, Profit Maximizers

Short manufacturing lead times allow you to tap into demand by increasing your chargeable space quickly and economically. More space - more revenue - more profit.
